About the ICBCC 1	A multi-stakeholder alliance formed the International COVID-19 Blood Cancer Coalition #ICBCC to address the impact of COVID-19 on #immunocompromised blood cancer patients and to develop solutions to mitigate the risks for those affected. #ICBCC #considerthecompromised	268	A multi-stakeholder alliance comprising representatives from the global patient advocacy and clinical communities formed the International COVID-19 Blood Cancer Coalition #ICBCC to address the impact of COVID-19 on #immunocompromised blood cancer patients and to develop solutions to mitigate the risks for those affected. #ICBCC #considerthecompromised	About_the_ICBCC_0_Lead_post About_the_ICBCC_1	
2	#ICBCC urges all stakeholders in health policy & care to enable access to life-saving therapies for #immunocompromised blood cancer patients & to drive change to accommodate the specific needs of those patients! #ICBCC #considerthecompromised	242	The International COVID-19 Blood Cancer Coalition #ICBCC urges all stakeholders in health policy and care to enable access to life-saving therapies for #immunocompromised blood cancer patients, and to drive change to accommodate the specific needs of those patients in general and during the COVID-19 pandemic. #ICBCC #considerthecompromised	About_the_ICBCC_2	
3	#ICBCC is calling upon stakeholders in health policy & care to enable access for #immunocompromised blood cancer patients to life-saving therapies before, during and after infection. #considerthecompromised	206	The International COVID-19 Blood Cancer Coalition #ICBCC is calling upon stakeholders in health policy and health care to enable access for #immunocompromised blood cancer patients to life-saving therapies before, during and after infection, and advocates for fundamental changes to accommodate the specific needs of these patients in general and for the time of the COVID-19 pandemic. #considerthecompromised	About_the_ICBCC_3	
4	#ICBCC advocates for access to life-saving treatments for the most vulnerable before, during and after infection, and for fundamental changes in health policy and healthcare in general and during the COVID-19 pandemic. #considerthecompromised	242	#ICBCC advocates for access to life-saving treatments for the most vulnerable before, during and after infection, and for fundamental changes in health policy and healthcare to meet the specific needs of these patients in general and during the COVID-19 pandemic. #considerthecompromised	About_the_ICBCC_4	
5	About 3 percent of the world's population is #immunocompromised and more susceptible to die from COVID-19. To address the impact of the disease on immunocompromised blood cancer patients, a multi-stakeholder alliance has formed the #ICBCC. #considerthecompromised	264	An estimated three percent of the world's population is #immunocompromised and more susceptible to contracting COVID-19, severe disease course and death. Their circumstances have mostly been neglected in the last two years, with significant differences depending on geographical location. To address the impact of COVID-19 on immunocompromised blood cancer patients and develop solutions to mitigate the risks posed by this disease, a multi-stakeholder alliance of representatives from the global patient advocacy and clinical communities has formed the International COVID-19 Blood Cancer Coalition (#ICBCC). #considerthecompromised	About_the_ICBCC_5	
6	While 97% of the population can prevent a severe disease course with vaccination, #immunocompromised blood cancer patients often cannot produce antibodies against COVID-19. Therefore, #ICBCC advocates for access to life-saving therapies for its patients. #considerthecompromised	279	While 97% of the adult population can prevent a severe COVID-19 disease course and enter a new normal by getting vaccinated, the vulnerable 3% - #immunocompromised patients - oftentimes cannot mount a sufficient antibody response. Therefore, the #ICBCC calls on relevant stakeholders in health policy and care to enable access to life-saving therapies for #immunocompromised blood cancer patients and to drive change to meet the special needs of these patients in general and during the COVID-19 pandemic. #ICBCC #considerthecompromised	About_the_ICBCC_6	
7	Join us in advocating for #immunocompromised blood cancer patients! We invite the global blood cancer advocacy & clinical community to join #ICBCC. Thank you for supporting this important initiative & contributing your time and expertise! #considerthecompromised	262	Join us in advocating for #immunocompromised blood cancer patients! We invite representatives from the global blood cancer advocacy and clinical community to join the coalition. If you have not yet been approached by us but would like to get involved and join the discussion, please contact the ICBCC Secretariat at info@icbcc.info. Thank you for supporting this important initiative and contributing your time and expertise! #ICBCC #considerthecompromised	About_the_ICBCC_7	
8	In a joint statement, > 70 researchers, clinicians, patient organisations & medical societies urge stakeholders to consider #immunocompromised blood cancer patients in health policy decisions: www.icbcc.info/patient-impact-statement #ICBCC #considerthecompromised	263	In a joint statement, more than 70 networks and national organisations of the global patient advocacy community as well as renowned medical societies and representatives from the global clinical community urge stakeholders to consider #immunocompromised blood cancer patients in health policy decisions. You can find the statement here: www.icbcc.info/patient-impact-statement #ICBCC #considerthecompromised	About_the_ICBCC_8	
9	To aid advocating for the provision of COVID-19 treatment & care for #immunocompromised blood cancer patients, #ICBCC has prepared a joint statement endorsed by > 70 researchers, clinicians, patient organisations & medical societies: www.icbcc.info #considerthecompromised	272	To aid when advocating for the provision of COVID-19 treatment & care for #immunocompromised blood cancer patients, #ICBCC has prepared a joint statement endorsed by more than 70 researchers, clinicians, patient organisations & medical societies. Find the statement here: www.icbcc.info/patient-impact-statement/ #considerthecompromised	About_the_ICBCC_9	
10	To date, #ICBCC has been endorsed by 73 stakeholders – 55 patient organisations & 18 representatives from the clinical community. You can find the endorsers here: https://www.icbcc.info/patient-impact-statement/ #considerthecompromised	236	To date, #ICBCC has been endorsed by more 73 stakeholders – 55 patient organisations & 18 representatives from the clinical community. You can find the endorsers here: https://www.icbcc.info/patient-impact-statement/ #considerthecompromised	About_the_ICBCC_10	
POLICY 1 Lack of response	More than 1 in 4 #immunocompromised blood cancer patients do not produce COVID-19 antibodies & carry a high risk of severe disease course and death. #ICBCC calls for a change in health policy & access to life-saving treatments to protect those at risk! #considerthecompromised	277	More than 1 in 4 immunocompromised blood cancer patients do not produce COVID-19 antibodies after vaccination and carry a high risk of infection, severe disease course and death. Therefore, #ICBCC calls for a change in health policy in terms of early access to life-saving therapies before, during and after Infection to protect the most vulnerable! #considerthecompromised	POLICY_1	
2 Lack of response	While vaccines are an effective defence against severe COVID-19 for most people, about 25 % of #immunocompromised blood cancer patients can't produce COVID-19 antibodies after vaccination. They carry a high risk of infection and severe disease. #ICBCC #considerthecompromised	276	While vaccines are an effective defense against severe COVID-19 for most people, about 25 % of #immunocompromised blood cancer patients can't produce COVID-19 antibodies after vaccination. Those patients carry a high risk of infection and severe disease course. #ICBCC #considerthecompromised	POLICY_2	
3 Lack of response	Almost all blood cancer patients can consider themselves #immunocompromised. Not being able to mount a sufficient antibody response after vaccination against COVID-19, their lives depend on access to pre and post exposure treatment. #ICBCC #considerthecompromised	264	Almost all blood cancer patients and many survivors can consider themselves #immunocompromised. Not being able to mount a sufficient antibody response after vaccination against COVID-19, their lives and well-being depend on access to pre and post exposure treatment. Therefore, #ICBCC calls for a change in health policy to protect the most vulnerable! #considerthecompromised	POLICY_3	
4 SHIELDING	Due to prolonged shielding and lack of social contact, many #immunocompromised blood cancer patients suffer from psychosocial side-effects. #ICBCC calls on decision makers to facilitate access to psychological services for those people. #considerthecompromised	262	Due to prolonged shielding and lack of social contact, many #immunocompromised blood cancer patients suffer from psychosocial side-effects. Therefore, #ICBCC calls on decision makers to facilitate access to psychological and psycho-oncological services for those people. #considerthecompromised	POLICY_4	
5 SHIELDING	#immunocompromised blood cancer patients need access to psychological & psycho-oncological services as prolonged shielding has severe effects, such as deterioration of health due to lack of contact with family and friends. #considerthecompromised #ICBCC	253	#ICBCC calls on decision makers to facilitate access to psychological and psycho-oncological services for #immunocompromised blood cancer patients as prolonged shielding has severe effects, such as deterioration of health due to neglected care, as well as psychosocial effects due to lack of contact with family and friends. #considerthecompromised	POLICY_5	
6 Pre and post-exposure treatment	#ICBCC calls on decision makers in health policy to make access to life-saving pre and post exposure treatment and antivirals a policy for #immunocompromised blood cancer patients. #considerthecompromised #ICBCC	211	#ICBCC calls on decision makers in health policy to make access to life-saving pre and post exposure treatment and antivirals a policy for #immunocompromised blood cancer patients. #considerthecompromised #ICBCC	POLICY_6	

7 **Vaccines**	The International COVID-19 Blood Cancer Coalition #ICBCC and its 70+ statement endorsers urge decision makers to give #immunocompromised blood cancer patients access to vaccinations and additional doses. #considerthecompromised	227	The International COVID-19 Blood Cancer Coalition #ICBCC and its 70+ statement endorsers urge decision makers to give #immunocompromised blood cancer patients access to vaccinations and additional doses. #considerthecompromised	POLICY_7	
8 **Tests**	The #ICBCC asks decision makers in health policy to promote access to fast response COVID-19 testing for #immunocompromised blood cancer patients as many life-saving therapies must be instituted quickly after diagnosis to be effective. #considerthecompromised	259	The #ICBCC asks decision makers in health policy to promote access to fast response COVID-19 testing for #immunocompromised blood cancer patients as many life-saving therapies must be instituted quickly after diagnosis to be effective. To this end, special access to home tests for those patients, testing slots set aside or special testing sites as well as systems to ensure quick access to treatment for those patients that test positive could be part of the solution. #considerthecompromised	POLICY_8	
9 **Definition of IC patients**	Who is at high risk of COVID-19 and decisions regarding allocation of available therapies should be informed by the increasing volume of scientific literature on COVID-19 outcomes in several different #immunocompromised communities. #ICBCC #considerthecompromised	263	Who is at high risk of COVID-19 and decisions regarding allocation of available therapies should be informed by the increasing volume of scientific literature on COVID-19 outcomes in several different #immunocompromised communities. This is especially true for all those with lymphoid malignancies including many lymphomas such as CLL/SLL, regardless of whether they are before, during or after treatment. #ICBCC #considerthecompromised	POLICY_9	
10	#ICBCC calls for scientifically validated definition of who is #immunocompromised & at high risk of COVID-19. Nearly 2,5 years into the pandemic, this definition is still unclear. 30% of CLL patients, for instance, were seronegative after vaccination. #considerthecompromised	275	#ICBCC calls for a clear and scientifically validated definition of who is #immunocompromised and therefore at high risk of COVID-19. Nearly 2,5 years into the pandemic, this definition is still unclear. One example is those with Chronic Lymphocytic Leukemia who have long been recognised as being significantly #immunocompromised at all stages of disease, regardless of their treatment status. More than 30% of those patients with CLL – the most common leukaemia in U.S. adults – were seronegative after vaccination. Nearly 30% had no cancer therapy in the past two years, showing that the disease itself may impair the B cell function needed to make antibodies to vaccines. #considerthecompromised	POLICY_10	
RESEARCH **1**	#ICBCC calls on all scientists researching blood cancers to exert influence on decision makers & promote specific research on COVID-19 & #immunocompromised blood cancer patients, as well as existing & future antiviral & monoclonal antibody treatments. #considerthecompromised	276	#ICBCC calls on all scientists researching blood cancers to influence decision makers and promote specific research on COVID-19 and #immunocompromised blood cancer patients, as well as existing and future antiviral and monoclonal antibody treatments. #considerthecompromised	RESEARCH_1	
2	Time is of the essence for #immunocompromised blood cancer patients. #ICBCC urges decision makers in health policy, research and industry to fast-track clinical trials for next-generation antiviral and antibody treatments. #considerthecompromised	247	Time is of the essence for #immunocompromised blood cancer patients. #ICBCC urges decision makers in health policy, research and industry to fast-track clinical trials for next-generation antiviral and antibody treatments. #considerthecompromised	RESEARCH_2	
3	18 representatives from medical societies such as @EHA_Hematology @Ericllorg @iwCLL @BritSocHaem are already supporting the #ICBCC. Please join them in their efforts to protect #immunocompromised blood cancer patients around the world. #considerthecompromised	260	18 representatives from the clinical community and medical societies such as the European Hematology Association @EHA_Hematology, iwCLL @iwCLL, the European Research Initiative on CLL @Ericllorg and the British Society for Haematology @BritSocHaem are already supporting the #ICBCC. Please join them in their efforts to protect #immunocompromised blood cancer patients around the world. #considerthecompromised	RESEARCH_3	
4	18 representatives from the clinical community and medical societies, amongst others @EHA_Hematology @Ericllorg @iwCLL @BritSocHaem have endorsed the #ICBCC mission. You can find them in this joint statement: www.icbcc.info/patient-impact-statement #considerthecompromised	274	Currently 18 representatives from the clinical community and medical societies, amongst others @EHA_Hematology @Ericllorg @iwCLL and @BritSocHaem, have endorsed the #ICBCC mission. You can find all endorsers listed in this joint statement: www.icbcc.info/patient-impact-statement #considerthecompromised	RESEARCH_4	
PUBLIC **1**	Despite being a regular topic in health policy discussions, #immunocompromised blood cancer patients have not yet had their voice heard. Encourage friends & family to protect the most vulnerable by continued vaccination and wearing of masks. #considerthecompromised #ICBCC	272	Despite being a regular topic in health policy discussions, #immunocompromised blood cancer patients have not yet had their voice heard. Since they are not protected by vaccines against COVID-19 and have a high risk of infection and death, they rely on the help of the community. Please raise your voice to encourage friends and family to protect the most vulnerable and prevent the spread of COVID-19 by continued vaccination and wearing of masks in public spaces. Thank you for being considerate! #considerthecompromised #voiceforthevulnerable #ICBCC	PUBLIC_1	
2	Since #immunocompromised blood cancer patients are not protected by vaccines against COVID-19, they rely on the help of the community. #ICBCC calls on your help to protect those who cannot protect themselves by continued vaccination and wearing of masks. #considerthecompromised	279	Since #immunocompromised blood cancer patients are not protected by vaccines against COVID-19 and have a high risk of infection and death, they rely on the help of the community. Therefore, #ICBCC calls on your help and consideration to protect those who cannot protect themselves by continued vaccination and wearing of masks in public spaces. #considerthecompromised	PUBLIC_2	
3	As COVID-19 restrictions lift and life returns to normal, the lives of #immunocompromised blood cancer patients remain at risk. Please help protect those who cannot protect themselves by getting vaccinated and wearing a mask. We thank you. #ICBCC #considerthecompromised	271	As COVID-19 restrictions lift and life returns to a new normal, the lives of #immunocompromised blood cancer patients remain at risk. #ICBCC calls on you as a fellow citizen to help protect those who cannot protect themselves. Please get vaccinated and continue wearing a mask in public spaces, on public transport or in the supermarket. Thank you for your support! #considerthecompromised	PUBLIC_3	
4	Wearing a mask is no longer mandatory in many countries which puts #immunocompromised blood cancer patients, who often cannot produce antibodies, at extreme risk. Please help protect these people by wearing a mask in public spaces. #considerthecompromised #ICBCC	263	Wearing a mask is no longer mandatory in many countries, although it is an effective protection against infection with COVID-19. This puts #immunocompromised blood cancer patients, who often cannot produce antibodies against COVID-19 even after vaccination, at extreme risk. But these people are not frail, they are not necessarily old – they are children, your colleagues, they are mothers and fathers. Please help protect those people by wearing a mask in public spaces. Thank you for your support. #considerthecompromised #ICBCC	PUBLIC_4
